

Smaller profile - 70 x 60mm.

An example of where the larger plate was used due to water damage being wide spreading.

'FIX-A-PLATE™'

- ✓ The tap 'FIX-A-PLATE™' was designed to help plumbers fix the old aged problem of loose taps caused by water seepage weakening the timber underneath the bench or sink and causing the tap mounting to come loose, or buckled Plastic Plates.
- ✓ We have designed two models, with both being **3mm thick** to stop / reduce any buckling & thereby weakening of the tap mounting: -
 - Smaller profile - **70 x 60mm** x 2mm Thick
 - Larger profile – **130 x 75mm** x 2mm Thick
- ✓ We have allowed a slot in the front so you can just back-off the existing mounting & slip this plate in between. You may need to come in at an angle or the side to get pass the hoses and then twist plate around.
- ✓ If you see any buckling of the plate, then you have exceeded the needed force.
- ✓ We recommend that the sealing of the tap on the bench be fixed first, otherwise this may be a pointless exercise.

PACK OPTIONS: -

Option 1 - Standard Pack of 6 Small Fixa-Plates: -

Pt. No. **GA-FP-6S** RRP \$_____ + GST

Option 2 - Standard Pack of 3 Large Fixa-Plates: -

Pt. No. **GA-FP-3L** RRP \$_____ + GST

Option 3 - Mixed Pack of 1 x large & 2 Small Fixa-Plates.

Pt. No. **GA-FP-3M** RRP \$_____ + GST

NOTE for Retailers:-

Min. Order = One of each Pack or two of one model
