1300 85 25 15

Global Stainless Tapware are made from 304 S/S and designed for applications that require something that is more **Reliable, Tougher & Robust** than most other commercial Chromed Brass Tapware on the market. Since 2010 we have been manufacturing our S/S Taps in our Brisbane, Qld, factory with consistent reliability. We are led to believe we were the first to sell Stainless Commercial Tapware in Australia.

They are very suitable for all types of Internal & External Environments such as – **Medical, Laboratories, Industrial areas** also for **R.O. (Reverse Osmosis)** applications. The material will not fail unlike Chrome Brass taps, where the chrome gets worn / rubbed off from constant cleaning or aggressive cleaning chemicals.

Stainless Steel is very environmentally friendly as it is 100% recyclable. However, 304SS does have some limitations such as not handling saltwater areas - 316 or marine grade S/S is a much more suitable product.

Technical Information: -

Safe Constant Working Temperature range is:

4 – 65° C with occasional peaks up to 85° C

Safe Operational Working Pressure range is up to:

500kpa (as per NPC) with occasional Max. 1379 kpa

Readily available Spare Parts via all Plumbing Outlets nationwide.

NOTE: Due to the ridiculous way the legislation was written the **WELS Dept.** will not allow one Reg. Number be used to cover all Spout Sizes that could be fitted to the same tap body type, although they have the same Flow Rate & Star Rating. But they have allowed all various size Spouts of same type to be registered under one Number on their own – **GO FIGURE.** Due to the enormous amount of work involved & Cost associated in registering every separate tap & with every separate spout we have come up with another system, which is legal and saves money. The system is called **"BUILD YOUR OWN"**. In order for you to buy other size spouts shown below, you will have to use our Guide on page 3.

All Standard Spouts = WELS 3 Star & 9 lpm, Registration number 'T40512'.

In this Brochure the Part numbers with an Astrix are only Registered Taps in their own right. We chose 12" as the popular.

RRP	\$ All one Price					

STEP THREE: Put the Two Part-No.s together.

Put the two part numbers together to get the ordering part number.

e.g. Step One – **GS04** + Step two - **G3008S** = **GS04G3008S**
