GLOBAL FISHER: S/S SUB-ASSEMBLIES Pre-Rinses.

Step One - Choose the Sub- Assembly, then go to Step two over page

S/S STANDARD MODEL- Range has Varying heights from 540mm to 870mm

S/S POT -FILLER MODEL- Range has Varying heights from 550mm to 860mm

Choose the Sub-Assembly required and put it with Tap body shown over page

ALL Sub-Assemblies are made from 304 Stainless Steel = Lead Free

Reliable, professional sub-assembly solutions designed to support quality presentation, practical installation, and dependable performance across commercial tapware applications.

Product Overview

Global Fisher Sub-Assemblies are presented as pre-assembled solutions developed to streamline specification and support a professional finished product. Based on the supplied renderings and available product references, the range reflects a robust commercial design language with a focus on clean presentation, practical component integration, and suitability for demanding environments. Each unit can be matched to a Tap Body or your choice.

Key Highlights

- Professional sub-assembly presentation for customer-facing product literature
- Suitable for commercial-style tapware and rinse system applications
- Clean visual configuration to support product understanding and sales conversations
- Designed to communicate quality, reliability, and practical assembly intent
- A strong base for further product-specific brochure development as details are confirmed

Applications

This brochure draft is suited to a general customer audience and can support early-stage product presentation for distributors, project stakeholders, and buyers seeking a clear introduction to the Global Fisher sub-assembly range. It can also be expanded into a more technical brochure once product specifications, model codes, and component details are added.

Next Step

This is a strong starting point for a customer-facing brochure. I can next refine it with product names, part numbers, feature callouts, technical
